APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTE
TITLE OF INVENTION: BADMANNII FOR DIGGNOSTICS AND THERAPEUTICS
FILE REPRENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT PILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
LENGTH: 192
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 match found in sequence:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            APPLICANT: MARC J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: ARENGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: ARENGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.136

CURRENT APPLICATION NUMBER: US/09/252,991A

PRIOR PAPLICATION NUMBER: US 60/074,788

PRIOR FILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO. 25507
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GENERAL INFORMATION:
APPLICAMY: MARC J. Rubenfield et al.
APPLICAMY: MAC J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AEROGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERRACE: 107196_136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR APPLICATION NUMBER: US 60/094,190
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           LOCATION: (699)
OTHER INFORMATION: Identity of amino acid at the above locations are unknown.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 match found in sequence:

Sequence 186, Application US/09663600A

Sequence 186, Application US/09663600A

Patent No. 6573068
GBNERAL INFORMATION:
APPLICANT: Duclert, Aymeric
APPLICANT: Duclert, Aymeric
APPLICANT: Boughalert, Lydie
TITLE OF INVENTION: EXTENDED CDNAS FOR SECRETED PROTEINS
FILE REPRENCE: 31.US3.CIP
CURRENT FILING DATE: 2000-09-15
PRIOR APPLICATION NUMBER: 05/09/663,600A
CURRENT FILING DATE: 1999-11-13
PRIOR APPLICATION NUMBER: 60/066,677
PRIOR PELICATION NUMBER: 60/066,677
PRIOR PELICATION NUMBER: 60/066,677

Patent No. 6583275
GENERAL INFORMATION:
APPLICANT: Lynn A Doucette-Stamm and David Bush
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
ENTERCOCCUS FABCIUM FOR DIAGNOSTICS AND THERAPEUTICS
NUMBER OF SEQUENCES: 7310
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 match found in sequence:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- Bacteriol. 181:4308-4317(1999).
-!- FUNCITON: METHYLALION OF THE MEMBRANE-BOUND METHYL-ACCEPTING CHEMOTAXIS PROTEINS (MCP) TO FORM GAMMA-GLUTAMYL METHYL ESTER RESIDES IN MOR (BY SIMILARIY).
-!- CATALYTIC ACTIVITY: S-adenosyl-L-nethionine + protein L-glutamate = S-adenosyl-L-homocysteine + protein L-glutamate methyl ester.
-!- SIMILARITY: Contains 1 cheR-type methyltransferase domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                O'Toole R., Lundberg S., Fredriksson S.A., Jansson A., Nilsson B., Wolf-Watz H.;

"Nucleotide sequence of the cyanelle DNA from Cyanophora paradoxa.";
Plant Mol. Biol. Rep. 13:327-332(1995).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Kowallik K.V., Stoebe B., Schaffran I., Kroth-Pancic P., Freier U.; "The chloroplast genome of a chlorophyll a+c-containing alga, Odontella sinensis.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -i- SUBUNIT: Part of the 30s ribosomal subunit.
-i- SUBCELLULAR LOCATION: Cyanelle.
-i- SIMILARITY: BELONGS TO THE SIIP FAMILY OF RIBOSOMAL PROTEINS.
SEQUENCE FROM N.A.
STRAIN-UTEX LB 555 / Pringsheim;

RT 'Complete genome structure of the thermophilic cyanobacterium

Thermosynechococcus elongatus BP-1.";

RT 'Complete genome structure of the platform of the 30s subunit, it bridges

CC '- FUNCTION: Located on the platform of the 16s rRNA. Forms part of the

Shine-Dalgarno cleft in the 70s ribosome (By similarity).

CC '- SUBUNIT: Part of the 30s ribosomal subunit. Interacts with

proteins S7 and S18. Binds to IF-3 (By similarity).

CC '- SIMILARITY: BELONGS TO THE S11P FAMILY OF RIBOSOMAL PROTEINS.

-1- FUNCTION: Located on the platform of the 30S subunit, it bridges several disparate RNA helices of the 16S rRNA. Forms part of the Shine-Dalgarno cleft in the 70S ribosome (By similarity).

-1- SUBUNIT: Part of the 30S ribosomal subunit. Interacts with proteins 87 and 518. Binds to IF-3 (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                         "Organization of a large gene cluster encoding ribosomal proteins in
the cyanobacterium Synechococcus sp. strain PCC 6301: comparison of
gene clusters among cyanobacteria, eubacteria and chloroplast
                                                                                                                                                                             Gene 195:73-79(1997).

-!- FUNCTION: Located on the platform of the 30S subunit, it bridges several disparate RNA helices of the 16S rRNA: Forms part of the Shine-Dalgarno cleft in the 70S ribosome (By similarity).

-!- SUBNRIT: Part of the 30S ribosomal subunit. Interacts with proteins S7 and S18. Binds to IF-3 (By similarity).

-!- SIMILARITY: BELONGS TO THE S11P FAMILY OF RIBOSOMAL PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MEDLINE-97061201; PubMed-8905231;

   polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by parces. The disorders include SAPHO syndrome (synovitis, acces, the disorders include SAPHO syndrome (synovitis, acces, by custulosis, hypertosis and osteonyelitis), uveitis and endophthalmitis.

The access is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lessons associated with acne vujaris. A method for detecting the nervous system, however it is particularly involved in the inflammatory lessons associated with acne vujaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The collection of antibodies of specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as clasmostic agents for determining P. acnes presence, for example, by note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the proposition the published_pot_sequences.

The invention relates to novel nucleic acids encoding novel human foetal antigens. The nucleic acids and proteins are used to prevent, treat (e.g. by gene therapy) or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility are also used in diagnosing a pathological condition or susceptibility of a pathological condition or susceptibility are also used in alleviating symptoms associated with the disorders and in diagnostic immunosasays e.g. radicimmunoassays or enzyme linked immunosoxbent assays (ELISA). Disorders with the disorders and in clude autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cordivoracular disorders e.g. cardioracular disorders e.g. cardioracular disorders e.g. cardioracular disorders e.g. alzheimer's disease, infections caused by bacteria, viruses and funging the to sumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to prevent skin aging due to sumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. Numerous examples of diseases and disorders treated by the nucleic acids and proteins are given in the specification. The present sequence

with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antaqonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to requiate haematopoiesis, and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; in treatment of leukaemies. AMU29510-AMU3304 represent the amino acid sequences of novel human secreted proteins of the invention.

  ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of numan tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's
  disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischeemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and parasitic infections diseases such as viral, bacterial, fungal and parasitic infections of this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
  invention relates to novel genes (ABL89449-ABL90853) and proteins
   Novel 1405 isolated polypeptides, useful for diagnosis, treatment and
   prevention of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The cand gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating imaging of sites expressing (II). (I) and (II) are useful for treating clisorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and camino acid sequences. ABG00001-ABG30377 represent novel human call and polynucleotides of the invention.
  ó
  Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

   The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant organisms using with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
  Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant

The invention relates to an isolated tumour suppressor gene coding for splice variant RASSF1.A, RASSF1.B or RASSF1.C protein or its complement, or a DNA molecule which hybridises under stringent conditions to them.

Or a DNA molecule which hybridises under stringent conditions to them.

Or a methylated RASSF1 gene, non-expression, or alteration in RASSF1 where the methylation, non-expression or alteration in a sasociated with cancer in a human, by analysing an RASSF1 gene or an RASSF gene expression product from a tissue or body fluid of the human, a cell line from the transgenic animal, and administering RASSF1 agonists to treat cancer, a RASSF1 ann-human creaming for cancer therspeutics/drug candidates useful in treating cancer therspeutics/drug candidates useful in the detected methylated RASSF1 gene, which is useful for detected methylated RASSF1 gene, which is useful for detected methylated RASSF1 gene, which is useful for detected methylated or a mutation in RASSF1.

(M1) is useful for detected methylated RASSF1 gene, which is useful for detected methylated or a mutation or RASSF1.

(M2) is useful for detected methylated RASSF1 gene, which is useful for detected methylated or a subject, where the propagation or non-expression of the presence or absence of a genetic polymorphism as in the RASSF1 gene of the subject, where the methylation or non-expression or the presence of the genetic colymorphism identifies a subject that has or is at risk for developing cancer resulting from the RASSF1 gene and methylation to cancer, including cancer in methylation between the RASSF1 gene and methylation to cancer, including the resulting fance in the RASSF1 gene and cancer permits the early presymptomatic screening of individuals to identify those at risk for developing cancer. RASSF1 protein.  assays are useful for treating cancer. The gene for RASSF1 is located on chromosome 3p21p3. The present sequence represents the RASSF1 splice
   Novel tumor suppressor gene, termed RASSFI, useful for the diagnosis of predisposition to cancer by analyzing its methylation status, heterozygosity or mutation

   The present invention relates to a new complex of protein-protein interaction between betaTrCP (not defined in specification) and Ras SFI. The protein complex of the invention is useful for screening drugs or agents that modulate interaction of proteins. In particular, the protein complex is useful for identifying the Selected Interacting Domains (SID). The modulating compounds detected can be used for treating tumours. The polynucleotides encoding the protein complex may bused in gene therapy. The present amino acid sequence represents the human RasSFI protein that was used in the methods of the invention as a prey protein.
  Protein-protein complexes for screening drugs or agents that modulate interaction of proteins, e.g. for identifying the Selected Interacting Domains (SID), comprises interaction between beta-TrCP and Ras SFI

The invention describes an isolated nucleic acid (I) encoding the Ras effector with tumour suppressor activity and the ability to induce apoptosis, Minnl. A vector expressing (I) is useful for treating a human subject with a solid tumour (e.g., ovarian tumour) where at least one mutation in a Ras family gene results in increased Ras signalling activity and reduced levels of a Minnl product relative to non-tumour citysten and reduced levels of a Minnl product relative to non-tumour citsuse of like origin. Delivery of the vector is through liposome-DNA complexes and recombinant viruses or by systemic delivery and local delivery particularly surgical delivery, implantation or injection. The recombinant virus comprises operably linked recombinant nucleotide sequences comprising a suitable promoter sequence and viral sequences, where the viral sequences are ademovirus, adeno-associated virus, retrovirus, herpes virus, vaccinia virus and Moloney virus sequences. An antibody (II) against the protein encoded by (I) is useful for detecting a Minnl polypeptide in a sample and detecting a Minnl polypeptide in a sample and detecting a Minnl polypeptide in an array of tissue samples. Iron normal and tumour tissues. The method also comprises determining the coll type min the tissue sample that exhibits the
   antigen-antibody complex. This is the amino acid sequence of the human ras effector and tumour suppressor Minnl.
Novel nucleic acid, designated Minn1, encoding a protein with tumour suppressor activity, useful for treating cancer -
